New Home Market

units, down from 1,751 over the same period in 2008.

July activity rebounds; total supply remain high

Housing starts in the Winnipeg Census Metropolitan Area (CMA) totaled 177 units in July, 29 per cent fewer than the 251 units that began construction in July 2008. Over the first seven months of the year, total housing starts have reached 976

Construction began on 165 single-detached units in July, a decline of only five per cent from July 2008 when 173 foundations were poured. July's production brought the year-to-date total to 813 units, 26 per cent behind the pace set in 2008. The July decline was modest compared to the year-over-year reductions experienced in each of the first six months the year. While builders

have reported steadily increasing volume and quality of show home visitors over the summer months, some uncertainty remains that buyer interest will persist in the current economic environment.

Multiple dwelling starts, which include semi-detached, row, and apartment units, continued to lag 2008 levels in July, with 12 starts recorded. The first seven months of 2009 have seen 163 multi-family starts, down from 649 over the same period in 2008. The likelihood of significant multi-family development over the balance of 2009 is low as the supply of multi-family units in the market remains elevated.

While the inventory of all units, most particularly multi-family dwellings, has come down significantly over the last quarter, it remains high by historical standards. When we consider total supply, units under construction as well as those complete and unabsorbed, the Winnipeg CMA

exited July with 1,937 such units. This represents the first time since December 2006 that the total supply of homes has been below 2,000. By comparison, the ten-year average number of units in supply is 1,677.

In the Rural Municipalities (RMs) surrounding the City of Winnipeg, housing starts regained the share of CMA activity enjoyed through much of 2008. Slightly less than 34 per cent of the single-detached starts in July occurred outside of Winnipeg city. Of those, 19 were started in the RM of Springfield. The share of housing starts outside the city was

significantly lower over the previous nine months, representing no more than 25 per cent of all starts over that period.

Winnipeg's resale market enjoyed a strong July performance. The seasonally adjusted average sale price rose for the ninth consecutive month in July, reaching \$200,842. With seasonally adjusted sales rising while active listings were falling, price pressure remained upward. Multiple offers and sales above list price remain prominent features of the Winnipeg resale market.

The robust activity in the resale sector has not yet translated into increased demand for new homes for two reasons. In addition to the inventory concerns noted above, the relative price point between the average new and resale home remains quite large. As such, it is only those buyers considering a resale home purchase at a price point of more than \$350,000 who might also consider a newly constructed home. At present, such dwellings represent only nine per cent of all homes sold in the resale market.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **"Single-Detached"** dwelling (also referred to as **"Single"**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **"Semi-Detached (Double)"** dwelling (also referred to as **"Semi"**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **"Row (Townhouse)"** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other"** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **"intended market"** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **"Rural"** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
